Troubleshoot

1. For error that is shown below. Uninstall expo on the app. Then run the program using “Npm start” then the program is going to install the version of expo that is compatible with the program.

**There was a problem running
the requested app.**

Incompatible SDK version or no SDK version specified. This version of Expo Go only supports the following SDKs (runtimes): 44.0.0, 45.0.0, 46.0.0. A custom development build must be used to load other runtimes.

exp://192.168.1.12:19000

2. For dependencies errors run “npm i”
3. When running the app if the error below shows up, press control + C and run “npm start”

```
> Reloading apps
warn No apps connected. Sending "reload" to all React Native
  apps failed. Make sure your app is running in the simulator
  or on a phone connected via USB.
```

4. If the error below shows up on expo. It is an error because you are not using the same connectivity as the program running on your computer. Both your mobile app and your code program should run on the same connectivity.

 Opening project...

[Go back](#)

This is taking much longer than it should. You
might want to check your internet
connectivity.

5. If the mobile app is running slow or it is stuck, restart the application.
6. If uploading a picture is taking a long time, restart the app.
